‘Call for Leadership’ Series

Challenges and Opportunities for Higher Education in a Post-Pandemic World

March 24, 2021
Raul Reis (Emerson) and Kathleen McElroy (University of Texas at Austin) discuss how COVID has forced higher education to confront its biases and limitations and to find creative ways to move forward so institutions can better serve all students, faculty and communities. (please join the discussion by raising your hand or speaking up)
SEVEN

post-pandemic challenges and opportunities
1. Schools and programs can collaborate more closely, now that we’re all less location-bound.
2. If we’re less location-bound, there are long-term implications for hiring faculty, especially adjunct/part-time faculty.
3. Possibilities for **different delivery modalities** (low residency, hybrid, completely online) and **different structures** (shorter terms, multiple entry points; stackable courses, different credit structure).
4. Changes bring more or less equity and diversity to students, faculty and community?
5. What’s next in technology (asynchronous learning), resources and facilities (labs)?
6. Coming up creative ideas about space and technology
7. Effects on program growth and/or reduction and available resources
